DNS Privacy Reference Material

Relevant Internet Drafts and RFCs

DPRIVE - see the DPRIVE document website

RFC7626	**DNS Privacy Considerations**	This document describes the privacy issues associated with the use of the DNS by Internet users. It is intended to be an analysis of the present situation and does not prescribe solutions.
RFC7858	**Specification for DNS over TLS**	This document describes the use of TLS to provide privacy for DNS.
RFC7830	**The EDNS(0) Padding Option**	his document specifies the EDNS(0) 'Padding' option, which allows DNS clients and servers to pad request and response messages by a variable number of octets.
draft-ietf-dprive-padding-policy	**Padding Policy for EDNS(0)**	Specifies the preferred algorithm for padding with the option defined in RFC7830
RFC8310	**Usage Profiles for DNS over TLS and DNS over DTLS**	This document describes how a DNS client can use a domain name to authenticate a DNS server that uses Transport Layer Security (TLS) and Datagram TLS (DTLS). Additionally, it defines (D)TLS profiles for DNS clients and servers implementing DNS-over-TLS and DNS-over- DTLS
RFC8094	**Specification for DNS over Datagram Transport Layer Security (DTLS)**	
draft-ietf-dprive-eval	**Evaluation of Privacy for DNS Private Exchange (expired)**	This document describes methods for measuring the performance of DNS privacy mechanisms, particularly it provides methods for measuring effectiveness in the face of pervasive monitoring as defined in RFC7258.

DNSOP

RFC7766	**DNS Transport over TCP - Implementation Requirements**	This document specifies the requirement for support of TCP as a transport protocol for DNS implementations and provides guidelines towards DNS-over-TCP performance on par with that of DNS-over-UDP.
RFC7816	**DNS Query Name Minimisation to Improve Privacy**	
RFC7828	**The edns-tcp-keepalive EDNS0 Option**	This document defines an EDNS0 option ("edns-tcp-keepalive") that allows DNS clients and servers to signal their respective readiness to conduct multiple DNS transactions over individual TCP sessions.

DOH

draft-ietf-doh-dns-over-https	**DNS Queries over HTTPS**	Document describing the protocol aspects of running DNS over HTTP.

Other

RFC5246	**The Transport Layer Security (TLS) Protocol**
RFC7525	**Recommendations for Secure Use of TLS and DTLS**
RFC7413	**TCP Fastopen**
