

Live Traffic Levels

Real-time Traffic Graphs

We collect traffic levels (Queries per second) from a few of the DNS-over-TLS test servers

- Note that `dnsovertls.sinodun.com`, `dnsovertls1.sinodun.com` and `getdnsapi.net` are all enabled by default in the Stubby config file (we're not sure yet why `getdnsapi.net` gets more traffic!).
- Also note that only traffic levels are collected from these servers, there is no collection of source IP addresses or Query names.

If operators of other servers are interested in providing traffic levels, please contact sara@sinodun.com or jad@sinodun.com
